

WEEK 1: **LOCAL ENVIRONMENT SETUP**

Title: Installation and Testing of Local Development Environment

Fig 1.1: XAMPP Installation Directory

Caption: Figure 1.1 shows the XAMPP installation directory at C:\xampp containing all required subfolders including Apache, MySQL, PHP, phpMyAdmin, and htdocs.

Fig 1.2: XAMPP Control Panel

Caption: Figure 1.2 shows the XAMPP Control Panel with Apache and MySQL running (green status).

Fig 1.3: Localhost Server Test

Caption: Figure 1.3 shows the browser displaying http://127.0.0.1/ with the week1 folder visible.

Fig 1.4: Week1 Project Folder Structure

Caption: Figure 1.4 shows the Week1 folder containing hello.html, index.php, and test_db.php.

Fig 1.5: HTML Hello World Page

Hello World from HTML!

Week 1 is working.

Caption: Figure 1.5 shows the HTML Hello World page at `http://127.0.0.1/week1/hello.html` displaying "Hello World!".

Fig 1.6: PHP Hello World Page

Caption: Figure 1.6 shows the PHP Hello World page at `http://127.0.0.1/week1/index.php` displaying "Hello from PHP!".

Fig 1.7: Database Connection Test

Caption: Figure 1.7 shows the database test with green checkmarks confirming MySQL connection, database creation, table creation, and data insertion.

Fig 1.8: phpMyAdmin Database Verification

Caption: Figure 1.8 shows phpMyAdmin with week1db database and test_table containing the test record.

WEEK 1 REFLECTION (100 words)

During Week 1, I successfully set up my local development environment using XAMPP 8.2.12 with Apache and MySQL services. I created three test files: hello.html (pure HTML), index.php (PHP processing), and test_db.php (database connection script). The PHP script connects to MySQL, creates database week1db, creates test_table, inserts a test record, and reads it back - all confirmed through phpMyAdmin. The main challenge was understanding the document root location (C:\xampp\htdocs) where all project files must be placed. I learned the difference between static HTML (client-side) and PHP (server-side) execution.

WEEK 1 COMPLETION CHECKLIST

Task | Status |

XAMPP installed	✓	Complete
Apache server running	✓	Complete
MySQL server running	✓	Complete
Localhost accessible	✓	Complete
hello.html created	✓	Complete
index.php created	✓	Complete
test_db.php created	✓	Complete
Database week1db created	✓	Complete
Table test_table created	✓	Complete
Test record inserted	✓	Complete

| Database exported | ☒ Complete |
| All screenshots taken | ☒ Complete |
